# Lab7

---

- Practice to write a program that adapts `List<E>` to `DataCollection<E>` and `FileLoader<E>` to `FileImporter<E>`.
  - `java.util.List<E>` interface
    - `ArrayList`, `LinkedList`, `Vector`, `Stack` class implements `List<E>`.
  - `DataCollection<E>` interface extends `Iterable<E>`.
    - `DynamicArray<E>` class implements `DataCollection<E>`.
  - `ListDataCollection<E>` adapter class takes `List<E>` adaptee class to support `DataCollection<E>` target interface.
  - `FileImporter<E>` interface has `List<E> importFile(String filepath)` and `void exportFile(String filepath, List<E> list)`.
    - `ElementCSVImporter` class implements `FileImporter<Element>`.
  - `FileLoader<E>` interface has `List<E> load(String filepath)`.
    - `ElementJSONLoader` class implements `FileLoader<Element>`.
    - `ElementXMLLoader` class implements `FileLoader<Element>`.
  - `FileLoaderImporterAdapter<E>` adapter class takes `FileLoader<E>` adaptee class to support `FileImporter<E>` target

# Lab7

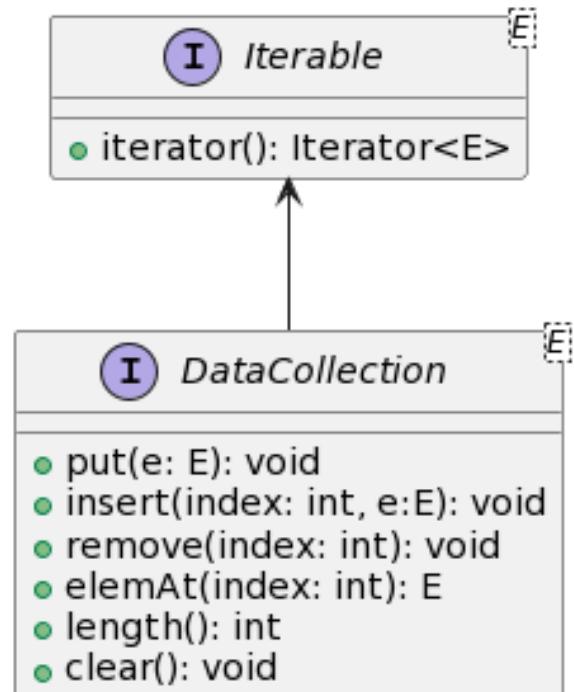

## □ java.util.Collection

# Lab7

- **DataCollection<E> interface extends Iterable<E> - foreach**

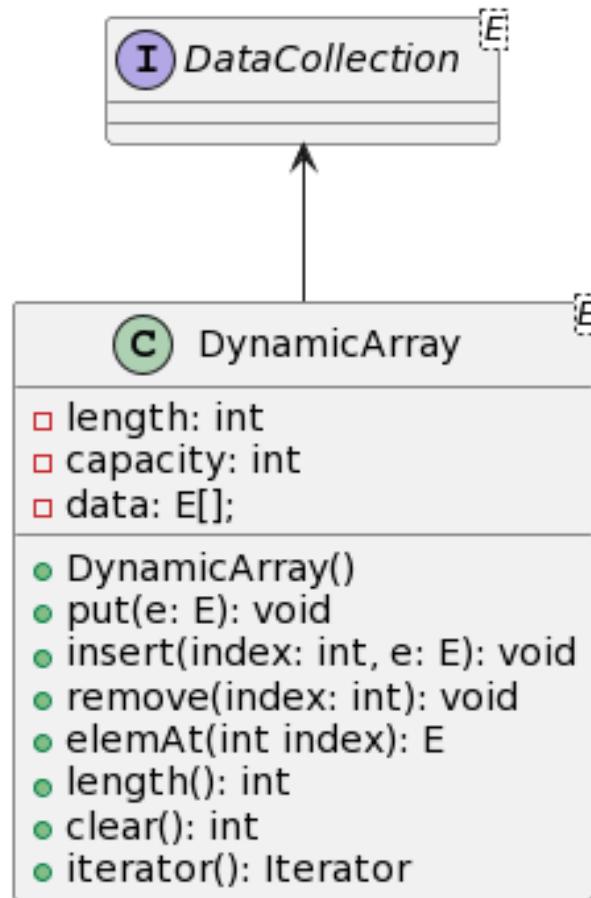

```
public interface DataCollection<E> extends Iterable<E> {  
    void put(E e);  
    void insert(int index, E e);  
    void remove(int index);  
    E elemAt(int index);  
    int length();  
    void clear();  
}
```

# Lab7

## ❑ DynamicArray<E> class implements DataCollection<E>

- A generic dynamic array class using E[] data

# Lab7

## ❑ DynamicArray<E> class implements DataCollection<E>.

- public void put(E e); // put element to the dynamic array
- public void insert(int index, E e); // insert element at the index
- public void remove(int index); // remove element at the index
- public E elemAt(int index); // get element at the index
- public int length(); // get the length of dynamic array (# of elements)
- public void clear(); // remove all elements and reset
- **public Iterator<E> iterator(); // returns  
DynamicArrayIterator<E>()**

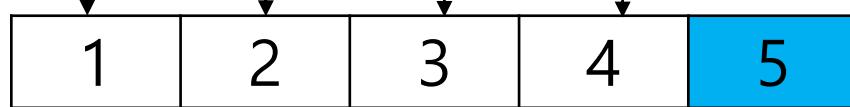

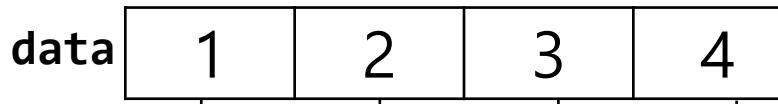

## ❑ DynamicArrayIterator<E> class implements java.util.Iterator<E>.

- public boolean hasNext();
- public E next();
- public void remove();

# Lab7

## □ Dynamic Array

- Put an element at the end of an array

**length=4**  
**capacity=4**

**length++**  
**capacity++**

- Put an element at the end of an array

**length=2**  
**capacity=5**

**length++**

# Lab7

## □ Dynamic Array

- Insert an element at the index 0

data

1	2	3	4
---	---	---	---

**length=4**  
**capacity=4**

6	1	2	3	4
---	---	---	---	---

**length++**  
**capacity++**

- Insert an element at the index 3

data

1	2	3	4	5
---	---	---	---	---

**length=5**  
**capacity=5**

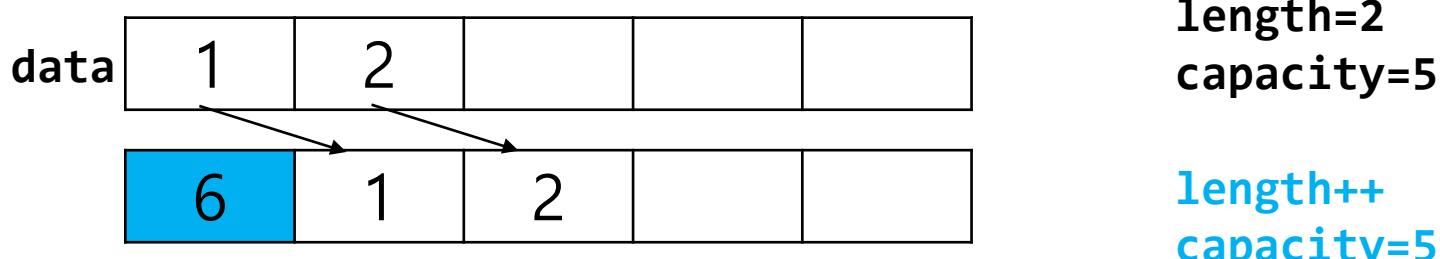

1	2	3	6	4	5
3	4	5			

**length++**  
**capacity++**

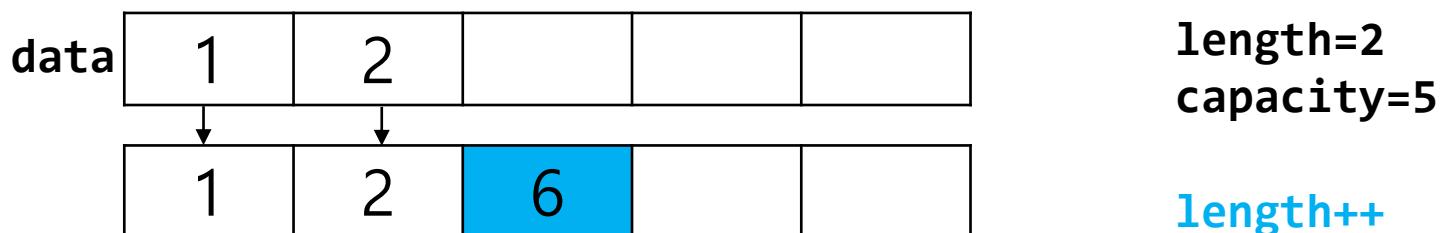

# Lab7

## □ Dynamic Array

- Insert an element at the index 0

- Insert an element at the index 2 – If (index > length)  
ArrayIndexOutOfBoundsException

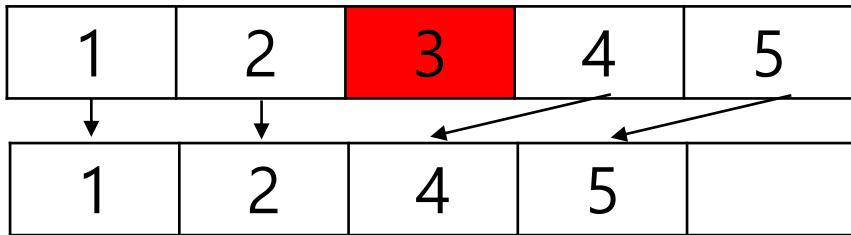

# Lab7

## □ Dynamic Array

- Remove an element at the index 2

data

**length=5**  
**capacity=5**

**length--**

- Clear

data

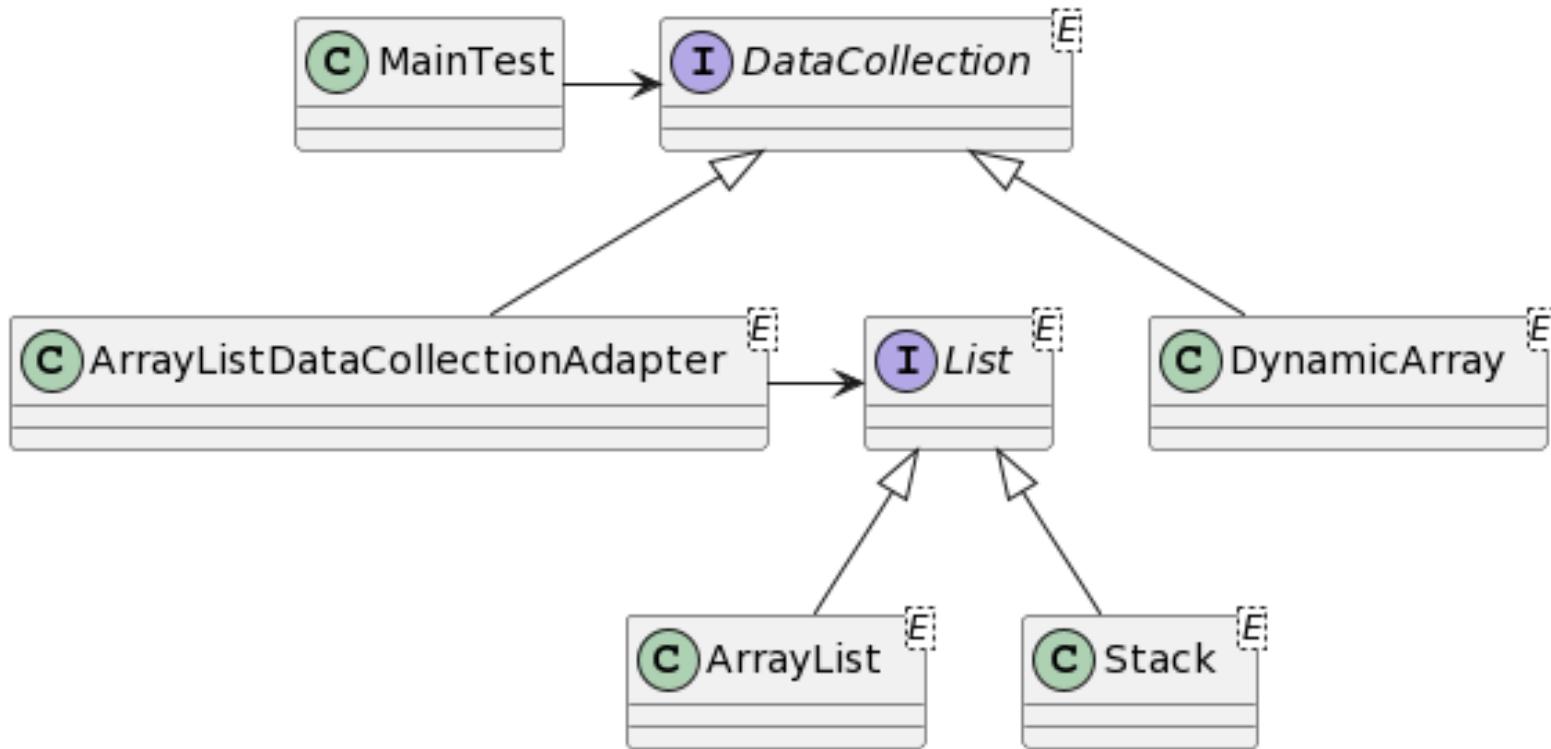

**length=5**  
**capacity=5**

**length=0 // reset**  
**capacity=SIZE // reset**

# Lab7

- ❑ **ListDataCollection adapter** class takes the **List adaptee** class to support the **DataCollection** target interface.

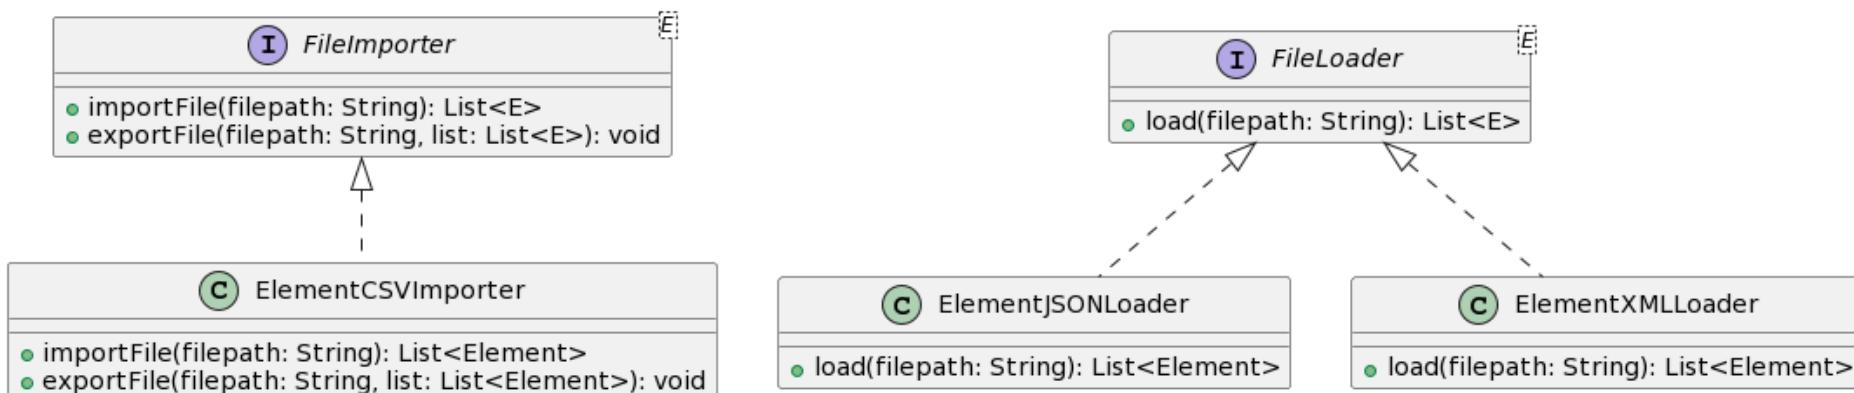

# Lab7

## ❑ **FileImporter<E>** interface

- **ElementCSVImporter** class implements FileImporter<Element>

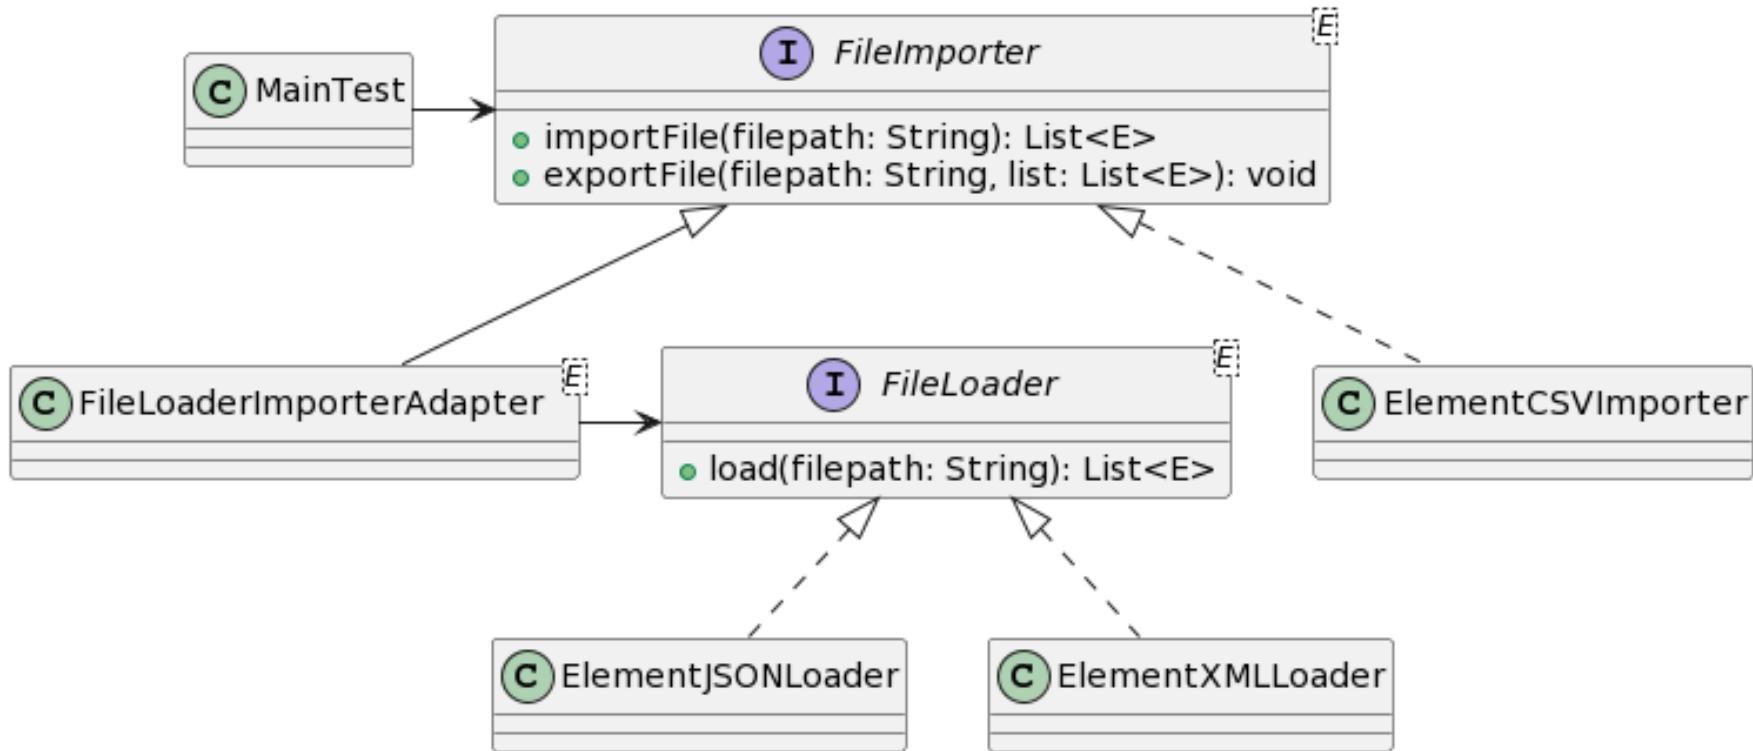

## ❑ **FileLoader<E>** interface

- **ElementJSONLoader (using com.google.gson.Gson)** class implements FileLoader<Element>
- **ElementXMLLoader (using org.w3c.dom.Element/Document/NodeList)** class implements FileLoader<Element>

# Lab7

- FileLoaderImporterAdapter<E> adapter class takes FileLoader<E> adaptee class to support FileImporter<E> target interface.

# Lab7

```
public class MainTest {  
    public static void main(String[] args) {  
        List<PeriodicElement> list =  
PeriodicElementImporter.loadCSV("PeriodicElements.csv");  
        System.out.println("\n\nDynamicArray add & print");  
        DataCollection<Element> arr = new DynamicArray<>();  
        for (PeriodicElement e : list) {  
            arr.put(new Element(e.getNumber(), e.getName(), e.getSymbol(),  
e.getWeight()));  
        }  
        arr.forEach(System.out::println); // test Iterable<E>  
        // remove & insert & elemAt & clear & remove all using iterator &  
print using for/while/foreach  
        List<Element> elements = new ArrayList<>();  
        list.forEach(e -> elements.add(new Element(e.getNumber(),  
e.getName(), e.getSymbol(), e.getWeight())));  
        elements.forEach(System.out::println);
```

# Lab7

```
DataCollection<Element> arr2 =  
    new ListDataCollectionApdater<>(elements);  
// remove & insert & elemAt & clear & remove all using iterator &  
print using for/while/foreach  
  
Stack<Element> stack = new Stack<>();  
// stack push all elements  
DataCollection<Element> arr3 =  
    new ListDataCollectionApater<>(stack);  
// remove & insert & elemAt & clear & remove all using iterator &  
print using for/while/foreach  
// ...
```

# Lab7

```
// ElementJSONLoader
FileImporter<Element> importer =
    new FileLoaderImporterAdapter<>(new ElementJSONLoader());
List<Element> elements2 = importer.importFile("Elements.json");
elements2.forEach(System.out::println);

// ElementXMLLoader
importer =
    new FileLoaderImporterAdapter<>(new ElementXMLLoader());
elements2 = importer.importFile("Elements.xml");
elements2.forEach(System.out::println);

// ElementCSVImporter
importer = new ElementCSVImporter();
elements2 = importer.importFile("Elements.csv");
elements2.forEach(System.out::println);
importer.exportFile("Elements1.csv", elements2);

}
```

# Submit to e-learning

---

- ❑ Add your code (e.g., test all methods with DataCollection using ArrayList, Stack) in the Lab7 assignment.
- ❑ Submit the Lab7 assignment (JAVA23-2-Lab7-YourID-YourName.zip including the report) to e-learning.
